

LYNX PRIME GLOBAL DIVERSIFIED FUND OF FUNDS B1 MINIMUM DISCLOSURE DOCUMENT

August 2016

INVESTMENT OBJECTIVE

The Lynx Prime Global Diversified Fund of Funds is a flexible fund of funds. The primary objective of the Lynx Prime Global Diversified Fund of Funds is to seek above average returns with below average risk for investors, with specific focus on asset allocation. The fund will be managed with assets shifted between the various investment markets to reflect changing global economic and market conditions. The portfolio will invest in a range of portfolios and collective investments, using an asset mix of equities, bonds, money and property market instruments in a variety of currencies in order to maximise returns for investors while minimizing risk. The fund can invest in offshore investments as far as legislation permits.

RISK PROFILE

The portfolio has a hard currency capital preservation orientation. Currency exposure is also diversified between GBP, Euro, Yen and USD. Volatility/risk in USD is therefore both a function of exchange rate movements against GBP, Euros and Yen as well as the underlying funds' performances. Volatility in Rands could be high due to fluctuations in the exchange rate between the rand and USD, GBP, Euros and Yen.

The MSCI All Country World equity index is disclosed in this fact sheet to illustrate general global equity market conditions which to a certain extent explain the returns of this fund.

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is registered as a Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a member of ASISA.

Fund/Market Commentary

The second quarter of 2016 proved to be as volatile as the first, with macroeconomic events such as Brexit dominating headlines and investor sentiment around the world.

The British referendum took the world by surprise as Britons voted to leave the European Union in June. The impact on global equity markets was severe in the days following the outcome as global stock indices such as the MSCI AC World Index and the FTSE 100 Index fell 7%. The British pound weakened to the lowest level in 30 years against the US\$ as the UK's credit rating was downgraded by S&P and Fitch.

However, it wasn't long before economic forecasters and investors alike, started pricing in a looser monetary policy stance amid the uncertain political environment. In fact, Mark Carney who is the governor of the Bank of England suggested the impact of the referendum will likely force them to cut rates in the coming months. The more dovish sentiment led to a sharp rally in risk assets towards the end of the quarter, especially emerging markets where yields are highly attractive in a world devoid of yield.

The Lynx SCI Global Diversified fund ended the quarter up 0.1% in US\$ and slightly down in rands. The main contributor during the quarter was our exposure to global fixed income assets that benefitted from the flight to safety. The looser monetary stance towards the end of the quarter drove listed property higher as investors sought yield in risk assets which benefitted the fund greatly. Although our direct exposure to the Euro area including the UK is rather limited, the weakness experienced in the euro and pound relative to the US dollar, was the main detractor from the performance in June

Nevertheless, the fund remains cautiously positioned and well diversified across regions and asset classes in an effort to provide stable and consistent returns.

A fund of fund unit trust only invests in other unit trust, which levy their own charges, which could result in higher fee structures for these funds.

The manager shall reserve the right to close the portfolio to new investors on a date determined by the manager.

Glossary of Terms

Fund of funds

A "fund of funds" is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Risk Profile: Low

Your primary aim is to achieve the required capital growth necessary to realise your long-term goals and objectives. You are prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Liquidity

This is the ability to easily turn assets or investments into cash.

Equities

An equity or share represents an institution/individual's ownership in a listed company and is the vehicle through which they are able to "share" in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Total Expense Ratio (TER)

management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total

Standard deviation

gauge the amount of expected volatility in an investment.

Sharpe ratio

The Sharpe ratio measures risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and

Annualised total returns

Annualised return is the weighted average compound growth rate over the period measured.

Compound rate of return (RoR)

The compounded rate of return is the average yearly (annualised) percentage that the fund has returned since the inception of the fund.

Sortino Ratio

The Sortino Ratio is similar to the Sharpe ratio in that it indicates the risk/reward profile of a fund based on past data. The difference is that the Sortino Ratio takes into

Downside deviation

A measure of downside risk that calculates the volatility on fund returns below a defined minimum. In this case, negative returns i.e. any monthly return below 0%.

Annual Returns (Highest/Lowest)

The highest and lowest annualised performance numbers are based on 10 non overlapping one year periods or the number of non overlapping one year periods from inception where performance history does not yet exist for 10 years.
