Fund Universe

The Lynx Prime Opportunities Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing predominantly in equities.

Investment Strategy

The fund may also invest in property, bond and money market collective investments in line with the portfolio objective.

Who should be investing ?

The fund is suitable for investors seeking exposure to the domestic equity market with maximum capital appreciation as their primary goal over the long term, and who have a higher risk appetite.

Total Investment Charges

Period (annualised): Mar 16 to Mar 17

Total Expense Ratio (TER) 1.77 %

Expenses related to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not be necessarily be an accurate indication of future TER's.

Transaction Costs (TC) 0.31 %

Costs relating to the buying and selling of the assets underlying the Financial Product

Total Investment Charges (TIC) 2.08 %

Transaction costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the Investment decisions of the investment manager and the TER. Inclusive of the TER of **1.77 %**, a performance fee of 0.00% of the net asset value of the class of the Financial Product was recovered.

Portfolio Fees

Management Fee	0.15% (excl. VAT)
Performance Fee	N/A
Advisory Fee	N/A
Investment Management Fee	0.55% (excl. VAT)

Mandate Compliance

The Fund remains within the reporting regime as at the date of this report.

Fund Performance

Growth of a R 100 000 Investment

Performance History: Based on an initial investment of R100000

Fund Commentary

Global markets in the third quarter of 2017 continued to march ahead as the synchronised recovery in global economic activity gained further traction. Low inflation numbers in the US, which have largely been a result of low oil prices and “transitory economic” anomalies have allowed the Fed to maintain a dovish stance for now. The upbeat market sentiment, together with strong corporate profits and a weak US dollar have spurred the S&P 500 to all-time highs. Trump’s much awaited tax reform policy was finally announced, and immediately US yields rose and the dollar strengthened which highlight the inflationary nature of his proposed policy changes.

Eurozone economic data remained robust and GDP from the second quarter was confirmed at 0.6%. The possibility of reduced stimulus measures has been the focus of the market for some time and a strong Euro reflects that. The MSCI EMU index returned 4.3% in Euros for the quarter.

Emerging markets (EM) benefitted greatly from the continuation of excess liquidity in developed markets. Portfolio flows, particularly in favour of fixed income assets accelerated in recent months, benefitting EM currencies and their respective sovereign bonds. Foreign investors seem to have ignored recent political turmoil in countries like Turkey and South Africa, primarily chasing high real yields. EM equities have also benefitted from the uptick in global economic activity and the performance of equities in these markets reflect that. The Shanghai composite index for example gained 5%, while Russia’s Micex and Brazil’s Bovespa gained 11% and 18% respectively in local currency terms over quarter.

Closer to home, the JSE All Share Index gained 8.9% during the quarter, this performance was mainly driven by a handful of heavyweights such as Naspers. However, low investor confidence and weak economic activity held back stocks that are more exposed to domestic economy. Foreigners remained net sellers of SA equities and net buyers of SA bonds. The rand was rather resilient throughout the quarter until it sold off sharply in September to end the quarter at 13.6/£.

The Lynx Opportunities Fund benefitted from the tailwind provided by a handful of blue chip stocks on the JSE, gaining 4.5% during the quarter. With that said, the upside capture of our managers varied greatly, depending on their exposure to companies such as Naspers and Richemont. As year-end approaches, all eyes will be on the Fed and the ECB in the coming quarter as the potential for policy normalisation has increased substantially in recent weeks. This, together with the binary ANC elective conference in December could result in an uptick in market volatility. Nevertheless, we are comfortable with the fund positioning and remain well diversified across asset class and geography.

Glossary of Terms

Fund of Funds is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Total Expense Ratio is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

An equity or share represents an institution/individual’s ownership in a listed company and is the vehicle through which they are able to “share” in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Risk Profile (High): You can afford to take on a higher level of risk (i.e. will have a greater exposure to equities in your portfolio) because of your investment time horizon or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive in five years or beyond.

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Tracking error is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager; it indicates how closely a portfolio follows the index to which it is benchmarked.

Information ratio, is a measure of the risk-adjusted return of a portfolio. In this case, it measures the active return of the manager's portfolio divided by the amount of risk that the manager takes relative to the benchmark.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio’s Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Alpha is a measure of the active return on an investment. It represents the excess returns of a fund relative to the return of a suitable benchmark.

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
