

INVESTMENT OBJECTIVE

The Lynx Sanlam Collective Investments Global Diversified Fund of Funds is a flexible fund of funds. The primary objective of the Lynx Sanlam Collective Investments Global Diversified Fund of Funds is to seek above average returns with below average risk for investors, with specific focus on asset allocation. The fund will be managed with assets shifted between the various investment markets to reflect changing global economic and market conditions. The portfolio will invest in a range of portfolios and collective investments, using an asset mix of equities, bonds, money and property market instruments in a variety of currencies in order to maximise returns for investors while minimizing risk. The fund can invest in offshore investments as far as legislation permits.

RISK PROFILE

The portfolio has a hard currency capital preservation orientation. Currency exposure is also diversified between GBP, Euro, Yen and USD. Volatility/risk in USD is therefore both a function of exchange rate movements against GBP, Euros and Yen as well as the underlying funds' performances. Volatility in Rands could be high due to fluctuations in the exchange

The MSCI All Country World equity index is disclosed in this fact sheet to illustrate general global equity market conditions which to a certain extent explain the returns of this fund

Lowest Annual % (2010/2011)	-1.9%

Period (annualised)	2013/04/01	to	2016/03/31
	Total Expense Ratio (TER)	Transaction Costs (TC)	Total Investment Charges (TER + TC)
	2.06%	0.01%	2.07%
	of the value of the Financial Product was incurred as expenses relating to the administration of the Financial Product	of the value of the Financial Product was incurred as costs relating to the buying and selling of the assets underlying the Financial Product	of the value of the Financial Product was incurred as costs relating to the investment of the Financial Product.

A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER. Inclusive in the TER of 2.06%, a performance fee of 0.31% of the net asset value of the class of Financial Product was recovered.

Disclaimer

All reasonable steps have been taken to ensure the information on this minimum disclosure document is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted (Money Mate). All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. The fund manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The portfolio management of all the portfolios is outsourced to financial services providers authorised in terms of the Financial Advisory and Intermediary Services Act, 2002. A fund of funds is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of fund. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Manager Information: Sanlam Collective Investments (RF) (Pty) Ltd (Sanlam Collective Investments) ,PO Box 30 Sanlam 7532/ Sanlam Head Office, 2 Strand Rd, Bellville 7530. Sanlam Collective Investments is responsible for the administration of investments in the portfolio and retains full legal responsibility for this portfolio. The management of investments is outsourced to Lynx Fund Managers (FSP23987), an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act.

The opening quarter of 2016 proved to be a volatile period for all major asset classes. In fact, at one point the MSCI World Index was down 11.5% but eventually recovered almost all of these losses to end the quarter flat.

More recently there has been a major reversal from growth to value stocks which has caught many investors off-guard. The slight uptick in commodity prices on the back of a slightly weaker dollar, compounded by an enormous short squeeze, sent resource counters sky rocketing even as the emerging market currencies strengthened for the first time in months. The dovish tone from the U.S. Federal Reserve in the 1st quarter provided a tail wind for emerging markets which have been under major pressure in recent times. Despite a weak local economic growth outlook, combined with a worsening inflationary outlook, and ongoing political instability, the South African Rand strengthened to 14.76 in U.S. Dollar terms from 15.55 at the end of last year. The rather mooted expectations of future rate hikes in the U.S. has once again reignited the search for yield globally. This drove investor into high yielding instruments such as listed property which generated stellar returns in March.

Lynx SCI Global Diversified benefitted from these tail winds in the third quarter, and even though the performance was offset by a stronger rand, we are pleased with the hard currency dollar return. The fund remains well diversified across asset classes as well as geographic locations. We are still prudently positioned and we continue to allocate proportionality to those investments that offer the best risk adjusted returns.

A fund of fund unit trust only invests in other unit trust, which levy their own charges, which could result in higher fee structures for these funds.

The manager shall reserve the right to close the portfolio to new investors on a date determined by the manager.

Glossary of Terms

Fund of funds

A "fund of funds" is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Risk Profile: Low

Your primary aim is to achieve the required capital growth necessary to realise your long-term goals and objectives. You are prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Liquidity

This is the ability to easily turn assets or investments into cash.

Equities

An equity or share represents an institution/individual's ownership in a listed company and is the vehicle through which they are able to "share" in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily

Standard deviation

Standard deviation (also called monthly volatility) is a measure of how much the returns on an investment change from month to month. It is typically used by investors to

Sharpe ratio

The Sharpe ratio measures risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio

Annualised total returns

Annualised return is the weighted average compound growth rate over the period measured.

Compound rate of return (RoR)

The compounded rate of return is the average yearly (annualised) percentage that the fund has returned since the inception of the fund.

Sortino Ratio

The Sortino Ratio is similar to the Sharpe ratio in that it indicates the risk/reward profile of a fund based on past data. The difference is that the Sortino Ratio takes into

Downside deviation

A measure of downside risk that calculates the volatility on fund returns below a defined minimum. In this case, negative returns i.e. any monthly return below 0%.

Annual Returns (Highest/Lowest)

The highest and lowest annualised performance numbers are based on 10 non overlapping one year periods or the number of non overlapping one year periods from inception where performance history does not yet exist for 10 years.
