

LYNX SANLAM COLLECTIVE INVESTMENTS OPPORTUNITIES FUND OF FUNDS C1
MINIMUM DISCLOSURE DOCUMENT
March 2016

FUND PROFILE

The Lynx Sanlam Collectice Investments Opportunities Fund of Funds (legal registered name of the fund) is a multi-managed fund that invests in a diversified portfolio of collective investments managed by a number of leading South African investment managers. The fund is suitable for investors seeking exposure to the domestic equity market with maximum capital appreciation as their primary goal over the long term, and who have a higher risk appetite.

INVESTMENT OBJECTIVE

The objective of the Lynx Sanlam Collective Investments Opportunities Fund of Funds is to generate above average growth in capital over the medium to long term. Income generation will be a secondary objective of the portfolio. A minimum of 80% of the fund's asset will be invested in domestic equities at all times. The fund may also invest up to 25% offshore.

ASSET ALLOCATION

Period (annualised)	2013/01/02	to	2015/12/31
	Total Expense Ratio (TER)	Transaction Costs (TC)	Total Investment Charges (TER + TC)
	4.01%	0.00%	4.01%
	of the value of the Financial Product was incurred as expenses relating to the administration of the Financial Product	of the value of the Financial Product was incurred as costs relating to the buying and selling of the assets underlying the Financial Product	of the value of the Financial Product was incurred as costs relating to the investment of the Financial Product.

A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER. Inclusive in the TER of 4.01%, a performance fee of 0.16% of the net asset value of the class of Financial Product was recovered.

Disclaimer

Although all reasonable steps have been taken to ensure the information on this minimum disclosure document is accurate, the Sanlam Collective Investments (RF) (Pty) Ltd ("Sanlam Collective Investments") does not accept any responsibility for any claim, damages, loss or expense; however it arises, out of or in connection with the information. No member of Sanlam gives any representation, warranty or undertaking, nor accepts any responsibility or liability as to the accuracy of any of this information. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision. The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performances are not necessarily a guide to future performances, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available from the Manager, Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted (Money Mate). All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ("CISCA"). The fund may from time to time invest in foreign instruments which could be accompanied by additional risks as well as potential limitations on the availability of market information. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates. The fund manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The portfolio management of all the portfolios is outsourced to financial services providers authorised in terms of the Financial Advisory and Intermediary Services Act, 2002. A fund of funds is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of fund. Standard Bank of South Africa Ltd is the appointed trustee of the Sanlam Collective Investments scheme. Manager Information: Sanlam Collective Investments (RF) (Pty) Ltd (Sanlam Collective Investments) ,PO Box 30 Sanlam 7532/ Sanlam Head Office, 2 Strand Rd, Bellville 7530. Sanlam Collective Investments is responsible for the administration of investments in the portfolio and retains full legal responsibility for this portfolio. The management of investments is outsourced to Lynx Fund Managers (FSP23987), an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act.

Fund/Market Commentary

The opening quarter of 2016 proved to be a volatile period for all major asset classes. In fact, at one point the MSCI World Index was down 11.5% but eventually recovered almost all of these losses to end the quarter flat.

Closer to home we saw a major bifurcation as investors ditched growth orientated stocks, which had outperformed for many years, in favour of value orientated companies. The slight uptick in commodity prices on the back of a slightly weaker dollar, compounded by an enormous short squeeze, sent resource counters sky rocketing even as the rand strengthened. Although the JSE Resources Index gave away some of its early gains, it was still the best performing sector in the first quarter.

The dovish tone from the U.S. Federal Reserve in the 1st quarter provided a tail wind for emerging markets which have been under major pressure in the last couple of months. Despite a weak local economic growth outlook, combined with a worsening inflationary outlook, and ongoing political instability, the rand strengthened to 14.76 in U.S. Dollar terms from 15.55 at the end of last year. The rather mooted expectations of future rate hikes in the U.S. has once again reignited the search for yield globally and hence the strong performance of high yield investments such as local listed property. South African preference shares performed exceptionally well in March as the Reserve Bank hiked rates by a further 25bps. This comes after a 200bps in rate hikes since January 2014 and with the market pricing in a further 75bps of rate hikes in the coming year, the highly constrained consumer will be under more pressure than ever in the coming months.

The Lynx SCI Opportunities Fund continues to outperform over the medium to long term verses its peers and the market. The fund remains defensively positioned relative to most of its peers who either have more aggressive mandates, or have chased shares that have recently rallied hard in the rotation that I mentioned earlier. Neither our economic advisors, nor most of our underlying managers are convinced that we've seen the worst in the resource space and as a result we own very few of these counters. This generated massive outperformance in 2015 and should the trend continue, we'll reap the rewards.

A fund of fund unit trust only invests in other unit trust, which levy their own charges, which could result in higher fee structures for these funds.

The manager shall reserve the right to close the portfolio to new investors on a date determined by the manager.

Glossary of Terms

Fund of funds

A "fund of funds" is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Risk Profile: High

You can afford to take on a higher level of risk (i.e. will have a greater exposure to equities in your portfolio) because of your investment time horizon or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive in five years or beyond.

Liquidity

This is the ability to easily turn assets or investments into cash.

Equities

An equity or share represents an institution/individual's ownership in a listed company and is the vehicle through which they are able to "share" in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Standard deviation

Standard deviation (also called monthly volatility) is a measure of how much the returns on an investment change from month to month. It is typically used by investors to gauge the amount of expected volatility in an investment.

Sharpe ratio

The Sharpe ratio measures risk-adjusted performance of an investment or portfolio. It measures the amount of risk associated with the returns generated by the portfolio and indicates whether a portfolio's returns are due to excessive risk or not. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Annualised total returns

Annualised return is the weighted average compound growth rate over the period measured.

Compound rate of return (RoR)

The compounded rate of return is the average yearly (annualised) percentage that the fund has returned since the inception of the fund.

Sortino Ratio

The Sortino Ratio is similar to the Sharpe ratio in that it indicates the risk/reward profile of a fund based on past data. The difference is that the Sortino Ratio takes into account harmful volatility by taking into account the standard deviation of negative returns (downside deviation). A large ratio indicates a low probability of a large loss.

Downside deviation

A measure of downside risk that calculates the volatility on fund returns below a defined minimum. In this case, negative returns i.e. any monthly return below 0%.

Annual Returns (Highest/Lowest)

The highest and lowest annualised performance numbers are based on 10 non overlapping one year periods or the number of non overlapping one year periods from inception where performance history does not yet exist for 10 years.
