Fund Universe

The Lynx Prime Cautious Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing in a range of asset classes locally and abroad.

Investment Strategy

The fund has a maximum effective equity exposure of 40% and a maximum effective property exposure of 25%.

Who should be investing ?

The fund's asset allocation is suited to investor with a cautious approach to risk. The fund conforms to Regulation 28 of the Pension Fund Act.

Total Investment Charges

Period (annualised): Mar 17 to Feb 18

Total Expense Ratio (TER) 1.6%

Expenses related to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not be necessarily be an accurate indication of future TER's.

Transaction Costs (TC) 0.13%

Costs relating to the buying and selling of the assets underlying the Financial Product

Total Investment Charges (TIC) 1.73%

Transaction costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the Investment decisions of the investment manager and the TER. Inclusive of the TER of **1.6%**, a performance fee of 0.00% of the net asset value of the class of the Financial Product was recovered.

Portfolio Fees

Management Fee	0.15% (excl. VAT)
Performance Fee	N/A
Advisory Fee	N/A
Investment Management Fee	0.55% (excl. VAT)

Mandate Compliance

The Fund remains within the reporting regime as at the date of this report.

Fund Performance

Growth of a R 100 000 Investment

Performance History: Based on an initial investment of R100000

Fund Commentary

The backdrop for emerging markets turned sour in the second quarter, driven predominantly by the Fed which has reiterated its plans to continue its monetary tightening program, worries over Trump's protectionist policies and the potential for a full-blown trade war with China. South Africa failed to escape the negative sentiment, which weighed in on the returns of local interest sensitives such as bonds and listed property in the second quarter, falling 3.8% and 2.2% respectively. In fact, the JSE recently reported record outflows from SA bonds in June which dwarves the outflows experienced in the 2013 "Taper Tantrum". The exit by foreigners and subsequent spike in yields has provided a sanguine opportunity for local investment managers to step up to the plate and lock in an attractive yield.

At the start of 2018, local inflation expectations were anchored near 4%, which together with the synchronised global recovery and renewed political optimism with Cyril Ramaphosa at the helm, improved the chances for further interest rate cuts. More recently however, the surge in the oil price that has largely been driven by geopolitical tension, together with a weakening rand has eliminated any chance of rate cuts in 2018. In fact, the local bond market is currently pricing in a 60% chance of 50bps worth of hikes by the SARB by year-end.

Although local consumer sentiment has improved, there has been little evidence of an uptick in business confidence and domestic economic activity continues to disappoint. The Q1 GDP print for example came in far worse than expected, contracting 2.2% in the 1st quarter, stunning market participants, further accelerating the sell-off in local bond and equity markets. The biggest detractors came from manufacturing and mining, contributing a combined 1.6% of the 2.2% contraction. Additionally, SOE's such as heavily indebted Eskom, is already disappointing investors with threatened load shedding and high wage demands while SA Government remains the entities guarantor. It is no surprise then that businesses are not willing to commit to major investments and growth remains lacklustre.

The saving grace for local investors in Q2 has been the weakness of the Rand, which until recently has been unusually strong. It's estimated that 62% of the earnings of local listed companies in the Top 40 are derived offshore which provides a tailwind for local equities in a Rand weakening environment. The resource sector is a prime example of this and has been one of the best performing sectors recently. Not only have they benefited from an improvement in global growth and more stable commodity prices, but the Rand at these levels will help expand profit margins and improve their cash flow positions. Over the last 3 months, the JSE Basic Materials Index is up 19.2% and YTD it has gained 12.6% which makes it the only major index in positive territory.

With multi-asset funds under pressure after a period of subdued returns over the last 3 years, the recent risk-off environment has offered some respite and has propped up absolute numbers. Year to date, Lynx Cautious is up 3.5% although there has been a bifurcation of themes between the 1st and 2nd quarter this year, the fund has achieved top quartile performance and maintains a consistent ranking near the top of the second quartile over a 3 and 5 year period.

Glossary of Terms

Fund of Funds is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Total Expense Ratio is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

An equity or share represents an institution/individual's ownership in a listed company and is the vehicle through which they are able to "share" in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Risk Profile (Low): You are cautious about taking on risk (i.e. will have less exposure to equities in your portfolio). You want your capital to be safe and prefer fairly stable income and/or income growth. Even knowing that equities are a riskier asset class, you are comfortable to have some, albeit limited, exposure to them because you know they will add that little extra to your portfolio.

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Tracking error is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager; it indicates how closely a portfolio follows the index to which it is benchmarked.

Information ratio, is a measure of the risk-adjusted return of a portfolio. In this case, it measures the active return of the manager's portfolio divided by the amount of risk that the manager takes relative to the benchmark.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Alpha is a measure of the active return on an investment. It represents the excess returns of a fund relative to the return of a suitable benchmark.

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
