### Lynx Investment Philosophy & Investment Strategy

The Lynx Prime Collective Investments are managed on a multi-manager, multi-asset class basis. Using this approach allows us to select the best of breed managers and achieve better diversification across investment styles and asset classes. The additional diversification allows the funds to achieve their return objectives at lower risk than their peers. With the funds exhibiting lower volatility and drawdowns than their peers over time.

Our manager selection process aims to find high quality managers that use different approaches and investment styles, that when combined are able to consistently rank amongst the top performers within that assets class. i.e. this approach should ensure that our equity "box" should rank amongst the top equity funds. Managers are accessed on an ongoing basis with any which fail to meet our expectation being replaced.

The asset allocation is undertaken with both the mandate and the peers in mind. With significant deviation from the average being avoided in order to reduce the volatility of our peer group ranking and enhancing our long-term returns. We are peer group aware and strive to produce returns which place the funds in the top 2 quartiles vs their peer group on a consistent basis. This is monitored on an ongoing basis, with proactive steps taken the funds start to lag their peers. Ultimately if we can produce better than average returns at lower risk on a continent basis, investors will improve the likelihood of achieving their investment goals.

### Fund Objective

The objective of the Lynx Prime Opportunities Fund of Funds is to provide investors access to a diversified portfolio of collective investments invested predominantly in the equities asset class. The fund aims to provide investors with above average capital growth over the long term.

### Fund Universe

The Lynx Prime Opportunities Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing predominantly in equities locally and abroad.

### Who should be investing?

The fund's asset allocation is suited to investor with an aggressive approach to risk. The fund **does not** conform to Regulation 28 of the Pension Fund Act.

### Investor Risk Profile

### Income Distribution

Date	Dividend	Interest	Other	Total

March 2019

**Fund Commentary**

Local and global investors were treated to a relief rally in the first quarter following one of the most significant and broad-based sell-off's since the global financial crisis (in the 4th quarter of 2018). A more dovish stance by the Fed on the back of global growth concerns provided a tailwind for global markets, but especially emerging markets which have been under pressure since the start of Q2 2018 over fears of monetary tightening by major developed market central banks. With global liquidity expected to remain more accommodative for longer and the potential for some finality of the US-China trade-deal, risk assets bounced off their recent lows with interest sensitive assets like listed property benefitting the most.

The local market took direction from its global counterparts with risk-on sentiment driving major indices significantly higher. During the quarter, foreigners were net buyers of SA bonds but remain net sellers of SA equities, and have been so for the last 9 consecutive months. The JSE ALL Share Index gained 8.0% while the ALBI and SA Listed Property Index gained 3.8% and 1.5% (incl divs) respectively. While the returns from most portfolios in Q1 provided some comfort to investors after an ongoing period of subdued returns, the state of the economy doesn't match the improving returns on investor statements. The RMB/BER business confidence index in South Africa for example, fell 3 points to 28 in the first quarter of 2019, from 31 in the previous period. It is the weakest level of confidence since Q2 2017 and deterioration was observed in four out of the five sectors: construction, retail, wholesale, manufacturing and new vehicle trade.

One can't talk about the challenges of the domestic economy without mentioning Eskom, which for most South Africans has become somewhat of a swearword. In March during the height of the power outages imposed by stage 4 and 5 load shedding, it was reported that 40% of the 45K mw it generates was out due to breakdowns. More than half of Eskom's power generation is beyond its useful life and the financial constraints faced by previous administration has pushed these power plants too hard for too long. Commenting on the matter, Public Enterprises Minister Pravin Gordhan said, "We are a recovering democratic government and load shedding is the result of that. We'll get it right in the next year or two". The biggest impact from a GDP perspective is on mining, manufacturing and electricity production and it is estimated that should load shedding continue, it could detract from annual GDP growth by 0.9%. The fiscal impact of Eskom will continue to weigh on the rand, although the disinflationary pressures are likely to offset some of the impact.

Earlier in the quarter, Minister Mboweni delivered the budget for 2019/2020 and although it was light on direct taxes, it was certainly not an election friendly budget where expenditure was concerned. On the one hand, it's the first time we've seen treasury make a concerted effort to curb the ballooning wage bill, but at the same time, much of the fiscus is being constrained to support Eskom. Investors' minds were recently put to rest when Moody's announced that they would not downgrade SA and kept their outlook at stable.

Interestingly, the JSE lagged global markets in the first quarter and the performance was heavily skewed towards a few large multi-national companies like Naspers and Richemont as well as some miners like Anglo American and BHP Billiton. For example, 96% of the return of the ALSI is attributable to these 4 shares which account for roughly 40% of the index. On the other hand, Q1 was a disaster for many domestic companies with the likes of Mr Price, Massmart and Truworths all falling more than 18% while the likes of EOH and Tongaat fell 60% and 65% respectively.

It's no secret that consumers are under pressure, this is evident in some of the results we've seen from domestic retailers in recent months. They continue to feel the pinch, after years of poor economic growth, coupled with record high petrol prices and elevated interest rates. Some of these retailers have been able to shield consumers from second round effects of rising fuel costs, but this has squeezed their margins and this is evident in the results we've seen lately.

While South Africa has its own set of problems, it's important to remember that it is a small cog in a much larger machine and will take direction from the global economy. There has been a marginal economic slowdown in global growth recently but some finality on the US China trade deal has the potential to reignite global trade which stands to benefit emerging markets. A stable local general election could prove to be the catalyst the domestic economy desperately needs. An improvement in local consumer and business confidence could encourage a turnaround for many SA assets that are attractively priced relative to history and their global peers. Furthermore, a positive outcome could help the country secure much needed foreign fixed capital investments that depends heavily on an improvement in political stability.

### Glossary of Terms

**Fund of Funds** is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

**Total Expense Ratio** is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

**Risk Profile (Medium to High):** The investors' primary aim is to achieve the required capital growth necessary to realise his/her long-term goals and objectives. The investor is prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

**Volatility** is a statistical measure of the dispersion of returns for a given security or market index.

**Sharpe Ratio** is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

### Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
