

### Lynx Investment Philosophy & Investment Strategy

The Lynx Prime Collective Investments are managed on a multi-manager, multi-asset class basis. Using this approach allows us to select the best of breed managers and achieve better diversification across investment styles and asset classes. The additional diversification allows the funds to achieve their return objectives at lower risk than their peers. With the funds exhibiting lower volatility and drawdowns than their peers over time.

Our manager selection process aims to find high quality managers that use different approaches and investment styles, that when combined are able to consistently rank amongst the top performers within that assets class. i.e. this approach should ensure that our equity "box" should rank amongst the top equity funds. Managers are accessed on an ongoing basis with any which fail to meet our expectation being replaced.

The asset allocation is undertaken with both the mandate and the peers in mind. With significant deviation from the average being avoided in order to reduce the volatility of our peer group ranking and enhancing our long-term returns. We are peer group aware and strive to produce returns which place the funds in the top 2 quartiles vs their peer group on a consistent basis. This is monitored on an ongoing basis, with proactive steps taken the funds start to lag their peers. Ultimately if we can produce better than average returns at lower risk on a continent basis, investors will improve the likelihood of achieving their investment goals.

### Fund Objective

The objective of the Lynx Prime Cautious Fund of Funds is to provide investors access to a diversified portfolio of collective investments across all major asset classes. The fund aims to provide investors with capital growth over the long term at a rate of inflation plus 3% measured over a rolling 3 year period.

### Fund Universe

The Lynx Prime Cautious Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing in a range of asset classes locally and abroad.

### Who should be investing?

The fund's asset allocation is suited to investor with a moderate approach to risk. The fund conforms to Regulation 28 of the Pension Fund Act.

### Investor Risk Profile

### Income Distribution

Regulation 28 Compliant	Yes	
Issue Date	18 March 2020	

### Total Investment Charges

Period (Annualised): July 2018 to June 2019

**Total Expense Ratio (TER)** 1.5 %

Expenses related to the administration of the financial product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

**Transaction Costs (TC)** 0.09 %

Costs relating to the buying and selling of the assets underlying the financial product.

**Total Investment Charges (TIC)** 1.59 %

Transaction costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the Investment decisions of the investment manager and the TER.

### Portfolio Fees (Incl. in TIC)

Management Fee	0.15% p.a. (Excluding VAT)
Performance Fee	Not Applicable
Advisory Fee	Not Applicable
Investment Management Fee	0.55% p.a. (Excluding VAT)

### Mandate Compliance

The Fund remains within the reporting regime as at the date of this report.

Feb 2020

**Fund Commentary**

On the face of it, 2019 appears to have been a rather prosperous year for local investors. The FTSE/JSE All Share Index and the ALBI were up 12% and 11% respectively, the rand behaved itself, and the FTSE/JSE Property Index gained 2%. However, the dispersion of returns over the year, particularly in the stock market paints a very different picture.

For example, value underperformed growth by 14%, small caps underperformed large caps by 17%, and a basket of "SA Inc" shares in the SWIX 40 underperformed Rand hedge basket by approximately 35%. The lethargy in the domestic small & mid cap markets mirrors the tragic loss of appetite for risk assets that are directly exposed to the local economy, that continues to tumble along, falling into and out of recession quarter on quarter. While foreigners have been net sellers of SA equities for most of the last 6 years, the resumption of load shedding and a particularly negative MTBPS in Q4 appears to have added more fuel to this fire.

The real winners of 2019 were the platinum and gold miners, with the likes of Impala Platinum and Sibyanya Still-Water up 290% and 260% respectively. The blue-chip rand hedges took direction from the broad-based gains in developed markets and also performed strongly, with the likes of AB InBev, BAT, Naspers, and Richmond all delivering gains in excess of 20% for the year. On the other hand, some of the biggest losers were the local retailers like Shoprite (down 30%), Mr Price (down 23%), Truworths (down 40%) and Massmart (down 50%).

Despite the deteriorating fiscus and worries over a potential downgrade to junk status by S&P, local bonds performed exceptionally well in 2019, gaining 11%. In fact going into year-end, foreigners couldn't resist the juicy real yields on offer, only bettered by Turkey, Nigeria and Lebanon among our emerging-market peers. The November government bond auction was four times oversubscribed and foreigners have been net buyers of SA bonds for the three months running to December 2019.

The movement of the R/\$ over the year reflects the strong appetite for real yields in emerging markets, a stark contrast to the ever-growing mass of negative yielding debt in developed markets. Starting the year at 14.38, the rand gained 2.8% against the US\$ to 13.98 at year end. Considering the negative news flow around the countries fiscal woes, the ongoing Eskom crisis, the subdued economic activity, and the absence of any positive policy reforms, it's evident that importance of global factors (that currently favour the ZAR) outweigh the domestic issues that appear in the headlines.

CPI figures in November echoed the tepid growth environment investors have grown accustomed to, easing to 3.6% from 3.7% in October. Anaemic consumer confidence and muted growth in household spending explain some of the weakness in inflation, but delayed normalisation in meat prices due to the foot-and-mouth outbreak and normalisation in fuel prices have also contributed to weak inflation numbers.

The reserve bank has pencilled in 5.1% for CPI in 2020, peaking at 5.3% in the first quarter of 2020, but this remains well above consensus. The outlook for rising food inflation, higher fuel prices and higher prices for structural inefficiencies (such as electricity and water supply) remain upside risks to the inflation outlook.

The 2020 Budget in late February will be scrutinised after SA's ever worse fiscal position was outlined in the MTBPS in 2019, sparking concern that Moody's rating agency may strip the sovereign of its only investment grade rating this year. Should National Treasury fail to announce large reductions in its spending forecasts in the 2020 Budget, a ratings downgrade would likely follow.

### Glossary of Terms

**Fund of Funds** is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

**Total Expense Ratio** is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

**Risk Profile (Medium to High):** The investors' primary aim is to achieve the required capital growth necessary to realise his/her long-term goals and objectives. The investor is prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

**Volatility** is a statistical measure of the dispersion of returns for a given security or market index.

**Sharpe Ratio** is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

### Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
