Lynx Investment Philosophy & Investment Strategy

The Lynx Prime Collective Investments are managed on a multi-manager, multi-asset class basis. Using this approach allows us to select the best of breed managers and achieve better diversification across investment styles and asset classes. The additional diversification allows the funds to achieve their return objectives at lower risk than their peers. With the funds exhibiting lower volatility and drawdowns than their peers over time.

Our manager selection process aims to find high quality managers that use different approaches and investment styles, that when combined are able to consistently rank amongst the top performers within that assets class. i.e. this approach should ensure that our equity "box" should rank amongst the top equity funds. Managers are accessed on an ongoing basis with any which fail to meet our expectation being replaced.

The asset allocation is undertaken with both the mandate and the peers in mind. With significant deviation from the average being avoided in order to reduce the volatility of our peer group ranking and enhancing our long-term returns. We are peer group aware and strive to produce returns which place the funds in the top 2 quartiles vs their peer group on a consistent basis. This is monitored on an ongoing basis, with proactive steps taken the funds start to lag their peers. Ultimately if we can produce better than average returns at lower risk on a continent basis, investors will improve the likelihood of achieving their investment goals.

Fund Objective

The objective of the Lynx Prime Global Diversified Fund of Funds is to provide investors access to a diversified portfolio of collective investments invested predominantly in the equities asset class. The fund aims to provide investors with above average capital growth over the long term.

Fund Universe

The Lynx Prime Global diversified Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing predominantly in equities locally and abroad.

Who should be investing?

The fund's asset allocation is suited to investor with a moderately aggressive approach to risk. The fund **does not** conform to Regulation 28 of the Pension Fund Act.

Fund Commentary

The market gains in Q2 were widespread, but it wasn't exactly a smooth ride higher. The roller coaster market started off well in April but experienced a large pullback in May mostly in part to investor fear about trade/tariff tensions with U.S. and China. Then in June, central banks came to the rescue. Based on weaker economic data, they appear to be more inclined to lower rates than increase them. In a sense, bad economic news was good news for the markets. Whether you are a stock investor or a bond investor, the first half of 2019 was outstanding for financial markets. This has been a huge about-face from December when markets pulled back and sentiment was grim. The S&P 500 had its best June month in over 60 years.

2019 has, so far, been a year of confusion and contradiction. We've all been intensely focused on issues such as the escalating global trade war, but up until relatively recently, markets have largely shrugged off these threats. And we're seeing broader political uncertainty in the form of growing populism that weighs on investors' minds even if it hasn't yet affected long-term values. At the same time, central bank policy (especially in the U.S.) took a sharp turn from hawkish to dovish without much really changing from a fundamental perspective. Bond and equity markets are arguing with each other. Bond markets see trade-war escalation, weak global data and declining inflation expectations. Equity markets see Fed easing, China stimulus and a trade deal with China ahead of U.S. President Donald Trump's 2020 re-election campaign.

The bond market isn't always right, and the equity market story has some appeal, but there is one heavyweight indicator on the side of the bond market – the inverted yield curve. This has predicted every U.S. recession over the past 50 years. The inversion needs to be sustained for a couple of months to provide a strong signal, but it makes a persuasive case for caution. On the other hand, U.S. Federal Reserve (Fed) easing, China stimulus and a U.S.-China trade deal could trigger another bull run. But it's late cycle, the downside equity market risks outweigh the upside and betting on a market friendly outcome at mid-year 2019 is risky.

As we end the first half of this year with U.S. stocks (and large-cap growth tech stocks in particular) dominating global market performance, we find ourselves on a tightrope, as valuations (based on 12-month forward earnings) have recovered to their recent highs). If U.S. / China trade negotiations don't break down and businesses get a clearer macro picture on where/when to invest, then these valuation levels can hold. Global equities could then enter a "put-up-or-shut-up" period where further market advances would need to be confirmed by actual earnings growth.

So, apart from cash, pretty much everything was in demand following the Fed meeting, and it wasn't just risk-on versus risk-off. Precious metals also rallied alongside industrial commodities. Assuming no inflationary shocks and commodity prices remain contained, the Fed has moved itself to the sidelines. Should the markets face another bout of volatility, it will likely not be due to Fed tightening, and such a sell-off maybe short-lived if global central banks once again come to the rescue.

Now that the U.S. and China have stepped back (again) from the brink of a full-blown trade war to re-engage in trade negotiations (again), one can make a reasonable argument that markets are now priced at an equilibrium, delicately balanced between macro tailwinds and headwinds. Consider that global equities seem less influenced by global manufacturing sentiment, which has been in a slump since the early part of this year, and more by expectations of progress in global trade negotiations and dovish central bank (namely, the U.S. Federal Reserve) responses to ongoing economic weakness.

Looking forward global economic growth should pick up sometime in the second half thanks to accommodative monetary policies globally and the increasing likelihood of a large stimulus from China to counter the negative effect from trade tensions. This implies that equities are likely to rally again after a period of congestion within a trading range, supporting a cautiously optimistic portfolio allocation for the next 9-12 months. Diversification however both at the asset class level and within each asset class will be important e.g. equity style. While growth has had a tremendous run and calls are for lower rates in future, if the objective for low rates is finally achieved and inflation rears its head we may very well see rotation as investors seek out more attractively valued positions thereby entering the final and truly euphoric stage of the bull market.

Glossary of Terms

Fund of Funds is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Total Expense Ratio is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Risk Profile (Medium to High): The investors' primary aim is to achieve the required capital growth necessary to realise his/her long-term goals and objectives. The investor is prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Lump sum investment performances are quoted. Income distributions are in the calculations. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. One can also obtain additional information on Prime products on the Prime CIS website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
