Lynx Investment Philosophy & Investment Strategy

The Lynx Prime Collective Investments are managed on a multi-manager, multi-asset class basis. Using this approach allows us to select the best of breed managers and achieve better diversification across investment styles and asset classes. The additional diversification allows the funds to achieve their return objectives at lower risk than their peers. With the funds exhibiting lower volatility and drawdowns than their peers over time.

Our manager selection process aims to find high quality managers that use different approaches and investment styles, that when combined are able to consistently rank amongst the top performers within that assets class. i.e. this approach should ensure that our equity "box" should rank amongst the top equity funds. Managers are accessed on an ongoing basis with any which fail to meet our expectation being replaced.

The asset allocation is undertaken with both the mandate and the peers in mind. With significant deviation from the average being avoided in order to reduce the volatility of our peer group ranking and enhancing our long-term returns. We are peer group aware and strive to produce returns which place the funds in the top 2 quartiles vs their peer group on a consistent basis. This is monitored on an ongoing basis, with proactive steps taken the funds start to lag their peers. Ultimately if we can produce better than average returns at lower risk on a continent basis, investors will improve the likelihood of achieving their investment goals.

Fund Objective

The objective of the Lynx Prime Balanced Fund of Funds is to provide investors access to a diversified portfolio of collective investments across all major asset classes. The fund aims to provide investors with capital growth over the long term at a rate of inflation plus 6% measured over a rolling 3 year period.

Fund Universe

The Lynx Prime Balanced Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing in a range of asset classes locally and abroad.

Who should be investing?

The fund's asset allocation is suited to investor with a moderate approach to risk. The fund conforms to Regulation 28 of the Pension Fund Act.

Investor Risk Profile

Mar 2020

Fund Commentary

A month ago, China's authorities were criticized for their "draconian" measures used to curb the spread of the COVID-19 virus. Just over a month later and their economy is almost back at full capacity. With this in mind, Cyril Ramaphosa has been praised for his urgent intervention, which is quite similar in nature, putting SA into a national lockdown until the 16th of April. One week in and already the infection rate has slowed down to a more controllable level. Through private-public partnerships, the government is doing all it can to keep the virus away out of the most vulnerable communities. An outbreak in townships, where individuals live near one another, in appalling conditions, would be disastrous for the healthcare system which is already in a precarious situation.

All major local asset classes ended the month well in the red. Local equities fell 12%, bonds fell 10% and listed property fell 37%. The Rand weakened significantly to new multi-year lows against the US\$ but proved to be more resilient than many of our oil exporting peers like Nigeria, Russia and even Mexico. At the end of March, the Rand was trading 17.9 to the US\$, 19.7 to the Euro and 22.2 to the Pound.

One a more positive note, the collapse in the oil price will result in a significant cut in the petrol price in the coming month which, along with the recent cut in the repo rate, will provide some relief to households. The banking association of South Africa has also announced industry wide measures to allow a broad response by banks to provide relief to their customers. Examples of this are payment holidays and discounted rates without infringing on competition laws.

In a surprise announcement, the SARB cut the repo rate by 100bps in March and implemented several open-market measures to provide liquidity to the bond market. While these measures are stimulatory in nature, they shouldn't be described as quantitative easing which typically occurs when policy rates are near zero. The SARB's efforts provided some calm following the initial wave of foreigners who dumped approximately 6.5% of their holding of local bonds, in favour of safe-haven assets. SA's 10-year bond peaked at 13.2% mid-month after starting the year at about 8.3%. Thanks to the SARB policy measures, bonds rallied into the end of the month despite having been dealt a much anticipated downgrade by Moody's.

The portfolio has been rather defensively positioned for some time. Not only have we been underweight risk assets since the 3rd quarter of 2019, but locally the managers have been far more defensive in their positioning. We have also actively avoided SA listed property companies who are at the forefront of the structural slowdown in SA where there is an excess of supply and pricing isn't in their favour. SA inc stocks have been attractively priced for some time, but the lack of confidence in the country's growth prospects has deterred buyers. As a result, the portfolios have had a bias towards companies that earn most of the revenue outside of SA and more defensive in nature. Furthermore, foreign equity has generally been a more attractive option, and the portfolios have held an overweight position in this asset class. In March when global markets sold off heavily, we saw the rand weaken significantly which naturally provided a capital buffer.

Glossary of Terms

Fund of Funds is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Total Expense Ratio is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Risk Profile (Medium to High): The investors' primary aim is to achieve the required capital growth necessary to realise his/her long-term goals and objectives. The investor is prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of the participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Commission and incentives may be paid and if so, will be included in the overall costs. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Income is reinvested on the re-investment date. The Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Income distributions are included in performance calculations prior to deduction of applicable taxes. Fund of funds are funds that invests in funds of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. Investment performance is for illustrative purposes only. Investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual date of reinvestment. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. Certain investments, including futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. The daily cut off time is 14:00 for trades and the valuation point is 22:00 daily. Prices are published on Finswitch by 10:00 daily. One can also obtain additional information on Prime Investments products on the Prime Investments website and all price related queries or information is readily available on request. Prime Collective Investment Schemes Management (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
