

Lynx Investment Philosophy & Investment Strategy

The Lynx Prime Collective Investments are managed on a multi-manager, multi-asset class basis. Using this approach allows us to select the best of breed managers and achieve better diversification across investment styles and asset classes. The additional diversification allows the funds to achieve their return objectives at lower risk than their peers. With the funds exhibiting lower volatility and drawdowns than their peers over time.

Our manager selection process aims to find high quality managers that use different approaches and investment styles, that when combined are able to consistently rank amongst the top performers within that assets class. i.e. this approach should ensure that our equity "box" should rank amongst the top equity funds. Managers are accessed on an ongoing basis with any which fail to meet our expectation being replaced.

The asset allocation is undertaken with both the mandate and the peers in mind. With significant deviation from the average being avoided in order to reduce the volatility of our peer group ranking and enhancing our long-term returns. We are peer group aware and strive to produce returns which place the funds in the top 2 quartiles vs their peer group on a consistent basis. This is monitored on an ongoing basis, with proactive steps taken the funds start to lag their peers. Ultimately if we can produce better than average returns at lower risk on a continent basis, investors will improve the likelihood of achieving their investment goals.

Fund Objective

The objective of the Lynx Prime Global Diversified Fund of Funds is to provide investors access to a diversified portfolio of collective investments invested predominantly in the equities asset class. The fund aims to provide investors with above average capital growth over the long term.

Fund Universe

The Lynx Prime Global diversified Fund of Funds is a multi-managed fund that will consist of a mix of collective investment portfolios investing predominantly in equities locally and abroad.

Who should be investing?

The fund's asset allocation is suited to investor with a moderately aggressive approach to risk. The fund **does not** conform to Regulation 28 of the Pension Fund Act.

Fund Commentary

The first quarter of 2020 has been an unprecedented period in financial market history across numerous dimensions:

The U.S. stock market fell into a 20% bear market in the shortest time ever—just 22 days—and continued further, dropping 30% in a record 30 days. The typical historical bear market peak-to-trough decline has taken around 12 to 18 months.

Short-term expectations of stock market volatility, as measured by the VIX index—often referred to as the market’s “fear index”—closed at an all-time high in its 30-year history on March 16. And the market’s actual realized volatility has only been higher in October 1987 (Black Monday) and the late 1920s.

The 10-year and 30-year Treasury bond yields fell to all-time lows of 0.54% and 0.99%, respectively, on March 9. This before shooting back out to over 1% during the same month, adding to overall market volatility.

Oil prices had their biggest one-day drop since the 1991 Gulf War, plunging 25% on March 9, triggered by a price war between Saudi Arabia and Russia.

This quarter has not been an easy one for most investors. While it was already clear that we were in the later stages of the economic cycle, nobody could have predicted at the start of this year that large parts of the global economy would be brought to an abrupt halt by the COVID-19 pandemic.

Unfortunately, the debate has now moved on from whether or not there will be a recession this year, to how deep and long it will be. As markets have moved to reflect this new reality, equities have fallen sharply, with the worst returns coming in March. The S&P500 fell 20% over the quarter and the FTSE All Share Index declined by 25%.

Concerns about the effect of the shutdowns on profits have led to corporate bond prices declining, which will have detracted from the returns of some fixed income portfolios. As should be expected, riskier, junk-rated corporate bonds have fallen by more than investment grade rated companies, with high yield energy bonds the worst hit.

Commodity prices, other than gold, fell sharply over the quarter. As countries around the world halted activity to try to bring the spread of the virus under control, demand for most commodities declined, hitting prices. Oil was caught in a perfect storm with an agreement between OPEC and Russia to constrain supply breaking down just as the outlook for demand fell. This led the oil price to fall by more than 60%.

An unprecedented shock requires an unprecedented policy response. And that is what we have seen. Most encouraging has been the policy response from the likes of the UK and Germany where governments have committed to pay a significant proportion of workers’ wages during the shutdown to enable companies not to lay off staff despite the dramatic hit to sales. Overall, fiscal policy has already delivered a significant stimulus globally but further measures are still likely to be needed to deal with the size of this shock.

Central bankers have thrown the kitchen sink at the problem, cutting rates to their lower bound and restarting and expanding asset purchase programmes. The Fed’s commitment to purchase as many government bonds as necessary is a substantial step, which should enable it to keep government borrowing costs low, despite the massive fiscal stimulus that is required to deal with the economic consequences of the virus. The Fed’s corporate credit programme should also prove a significant support for investment grade corporate bonds.

Given the significant uncertainties surrounding the outlook, we continue to believe that a neutral allocation to risk assets, such as equities and credit, makes sense. With central bank and government support, highly rated large investment grade companies seem most likely to survive this shock whereas some junk-rated companies will likely not make it through this crisis. This suggests to us that a selective, up-in-quality approach continues to make sense within both credit and equities until there is greater clarity around the outlook.

Government bond yields are likely to remain low, despite significant government spending, supported by central bank purchases. However, with less room for government bond prices to rise now interest rates are at such low levels, investors may wish to consider alternative forms of portfolio diversification.

Glossary of Terms

Fund of Funds is an investment strategy of holding a portfolio of other investment funds rather than investing directly in stocks, bonds or other securities. This type of investing is often referred to as multi-manager investment. Investing in a fund of funds may achieve greater diversification. The benefit of diversification is that it can reduce volatility and the overall risk in the portfolio, while maintaining returns.

Total Expense Ratio is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Risk Profile (Medium to High): The investors' primary aim is to achieve the required capital growth necessary to realise his/her long-term goals and objectives. The investor is prepared to tolerate fluctuations in your returns because you know that the longer-term picture is worth the short term pain, even if that means you lose money sometimes. While diversified across all the major asset classes, your portfolio will be tilted more towards equities because you know they offer the best long-term returns of all the asset classes and thus your wealth will grow over time.

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Disclaimer

This is a minimum disclosure document and a general investor report. Collective Investment Schemes are generally medium to long term investments. The value of the participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Commission and incentives may be paid and if so, will be included in the overall costs. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Income is reinvested on the re-investment date. The Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Income distributions are included in performance calculations prior to deduction of applicable taxes. Fund of funds are funds that invests in funds of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. Performance numbers and graphs are sourced from Collective Endeavours Consulting (Pty) Ltd. NAV to NAV figures have been used. Investment performance is for illustrative purposes only. Investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual date of reinvestment. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. Certain investments, including futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. The daily cut off time is 14:00 for trades and the valuation point is 22:00 daily. Prices are published on Finswitch by 10:00 daily. One can also obtain additional information on Prime Investments products on the Prime Investments website and all price related queries or information is readily available on request. Prime Collective Investment Schemes Management (RF) (Pty) Ltd is a registered Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a wholly owned subsidiary of Prime Financial Services (Pty) Ltd, a member of ASISA.
